Trans. of Beton Herstellung Verwendung (West
Germany) 1962, v. 12, no. 11, p. 496-500.

DESCRIPTORS: *Concrete, Temperature, Thermal
stresses, Mechanical properties, Quality control.

Strong heat development in concrete during setting
and hardening can lead to thermal damage. Causes of
high temperature in concrete are analyzed. The cited
results of temperature measurements in concrete of
structural members should make it possible to
estimate the expected temperature rise in concrete in
various structural elements. Fresh (young) concrete
is particularly vulnerable to cracking. It not only has
